

Honeypot Anti-Spam Protection

Support: https://addons.prestashop.com/en/contact-us?id_product=89994

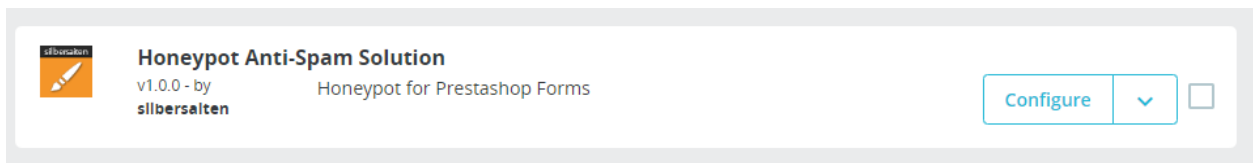

Description

The module adds hidden double antispam protection to the most important forms in your store, which should protect you as a store owner from spam attacks. The module uses the proven honeypot method to protect your Prestashop forms. It adds a hidden field to the forms and sets it to inactive. If the form is filled out by a bot and everything is activated automatically, even

The evaluation is done on the store level as well as on the server level, but is also evaluated by the server.

Installation

After you have downloaded and installed the module, you should be able to find it in your module list: **Modules**.

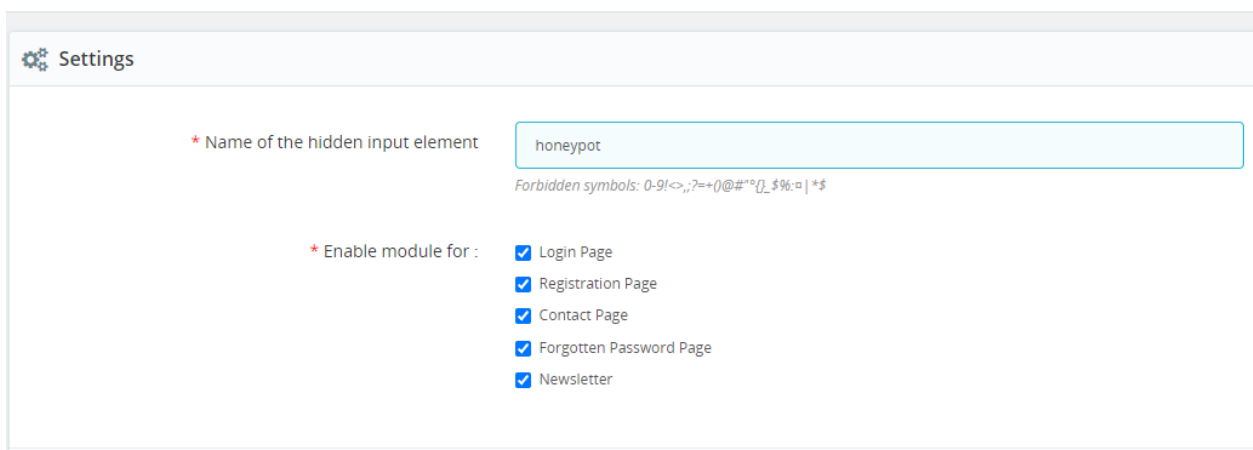

Functions

You can activate the module for the following forms

Advanced Parameters / HoneyPot

HoneyPot

A screenshot of the HoneyPot configuration settings page. The page title is 'Settings'. There is a field for 'Name of the hidden input element' with the value 'honeypot'. Below this field is a note: 'Forbidden symbols: 0-9!<>,;?=@#\"' data-bbox="117 569 884 781"/>

- Login
- Registration
- Contact
- Forgotten password
- Newsletter Block

Output

The module creates a hidden input field, which is activated by spambots. In this case the form submission will be blocked.
