Export	10
Example: Export to Google Merchant	11
Selling Portals	15

Purpose

Moussiq PRO is an export addon, that allows you to export your Prestashop product data to any price and product comparison engines, selling portals, or to use it for your own analytics and spreadsheets. Enter your search criteria to different products in order to prevent a long search. With this module you get a list of some selling portals and their required settings.

Installation

To install the module, go to Modules and Services > Modules and Services. Click on the button "Add new module".

Add a new module

Select the zip.-file of the module and click on "Upload this module".
After the module is uploaded and installed, it appears in your modules list.

Functions

General Settings

You will find the module in **Catalog > Moussiq**.

There are the predefined templates for selling portals.

Use the predefined templates or create new templates.

You can also see and edit the general export settings, which are predefined for each template, in the lower section under "Export settings".

- Export inactive products: If you enable this option, inactive products are also exported.

Export inactive products YES NO

Set to "No" to export active products only

- Export not available Products: If you enable this setting, unavailable products are also exported.

Export not available products YES NO

Set to "No" to export available products only

- **Export products with condition:** Here you can select the condition of the products to be exported.

Export products with condition

Select conditions in which you want your products to be exported

- **Export language:** Select the language in which the products are to be exported.

Export language

Select language in which you want your products to be exported

- **Customer group:** If you have different prices for different customer groups, select here which prices are to be exported.

Customer group

Export prices for selected customer group

- **CSV header:** Select whether a header with customizable field names should be generated together with the CSV files.

CSV header YES NO

This will add header with customizable field names to csv files generated by module

- **Field delimiter:** Specify the default field delimiter to use in the generated CSV files. This can still be modified specifically for the feeds.

Fields Delimiter

Specify default delimiter for fields in exported csv files. You can set up different delimiters for different services or have them use the default.

- **Enclosure characters:** Select the characters to be used as enclosure in the generated CSV file.

Enclosure character

Select an enclosure character for CSV data.

- **Export combinations:** If you set this option to Yes, product combinations are exported as separate products.

Export combinations YES NO

Choose whether or not this module should export product's combinations as separate products

- **Export Combination Name:** Specify whether to export product names with combination names.

Export combination name YES NO

Choose whether or not this module should export product's name with combination name

- **Default country:** Here you can specify the default country for deliveries. You can customize this for the different feeds.

Default country

Set default country to export prices for. You can change it for each service individually

- **Default Carrier:** If you have created more than one carrier in your shop, you decide the shipping costs of which shipper should be used in the feeds.

Default carrier

Prices of this carrier will be exported as "delivery price" for each product

Save your Settings.

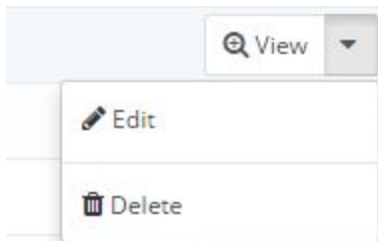

Create and edit templates

You can activate or inactivate the templates clicking on the hook.

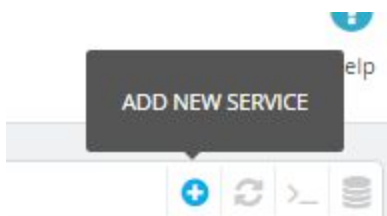

ID	Name	Enabled	
1	Shopmania	✓	View
2	eu_preisvergleich	✓	View
3	beslist	✓	View
4	LeGuide	✓	View
5	preisroboter	✓	View
6	become	✓	View

You have the following options for existing feeds:

- **View:** Click "View" to go to the CSV file or generate a new CSV file.
- **Edit:** Click Edit to change the settings for the feeds.
- **Delete:** Click "Delete" to delete the feed.

Click on **"Add new Service"** to create a new template.

Fieldsettings

- In the Name box, type the name of the feed.
- First open the template settings to set them.

↓ [Click here to display template settings](#) ↓

- **Status:** Enables and disables the corresponding feed.
- **Categories:** Here you can select which categories you want to export. Please tick the corresponding categories.
- **Export names:** In this field, you must enter a category into which products are to be placed. Most price search machines have prefabricated documents in which you can view the possible categories.

Categories:	<input type="checkbox"/>	ID	Name	Export Name
	<input type="checkbox"/>	1	 Root	<input type="text"/>
	<input type="checkbox"/>	2	└─ Home	<input type="text"/>
	<input checked="" type="checkbox"/>	3	└─ iPods	<input type="text"/>
	<input checked="" type="checkbox"/>	4	└─ Accessories	<input type="text"/>
	<input type="checkbox"/>	5	└─ Laptops	<input type="text"/>

Configure how often the CSV File is updated using **“cron”**.

For this function, you will need to have Cron Jobs enabled on your server. If you don't have this, you will need to generate the CSV File manually.

Auto-update DAYS

Monday	Tuesday	Wednesday
Thursday	Friday	Saturday
Sunday		

HOUR

00	01	02	03	04	05	06	07	08	09	10	11	12	13	14
15	16	17	18	19	20	21	22	23						

MINUTE

00	05	10	15	20	25	30	35	40	45	50	55
-----------	----	----	----	----	----	----	----	----	----	----	----

Select the time for this CSV to update automatically (cron must be enabled) [What is cron?](#)

- Some settings, which are already explained in the general settings, can be customized for each feed.

Inactive products policy ▼
Choose if you want to export inactive products for this service (overrides default settings).

Not available policy ▼
Choose if you want to export not available products for this service (overrides default settings).

Export products in condition(s) ▼
Select conditions in which you want your products to be exported (overrides default settings).

Language ▼
In what language would you like products to be exported

Customer Group ▼
In what customer groups would you like products to be exported

Delimiter
Specify field delimiter for this service. Leave blank to use default delimiter.

Enclosure ▼
Field enclosure for CSV data (eg.: "My Product" - double quotes here is an enclosure character)

Generate Header ▼
Csv header is the first line that does not include product information, but contains field names, like "Product name", "Product link", etc.

Fields

On the right side there are the available fields and on the left side there are the fields you use. Add fields via Drag & Drop to your template.

Each service provider has their own required configurations. Each price search engine has its own specifications for required fields.

☰ Available fields

<input type="checkbox"/> Addition date	<input type="checkbox"/> Additional shipping cost
<input type="checkbox"/> advanced_stock_management	<input type="checkbox"/> Available check

Field Name

Before Value

After Value

[Hide this Field's settings](#)

The price field has extra settings.

The field “Change Price” allows you to specify by how much the price of a product is to be raised or lowered on the sales portal.

Price(*precio*)  

Field Name

Before Value

After Value

Change price (-10%, +2.4, e.t.c.)

Apply Tax

Add Shipping Price

Include Price Reduction

 [Hide this Field's settings](#)

Another exception is the "availability check" box. Enter the values that should appear when the product is available or unavailable, for example, as a label for unavailable: Available in 3 weeks.

Available check  

Field Name

Before Value

After Value

Label for not available

Label for available

 [Hide this Field's settings](#)

To export product images, you must also make settings in the "Image URL" field. This field is empty, but has a mandatory field. Set the mandatory field so that images are exported correctly.

A mandatory field is the selection of the image size. Select the image size in which your product images are to be exported. If the field is blank, the image size is set to 0 and your images are not exported.

Optionally, you can specify whether to export all images or only individual images.

If you are using the watermark module, you can also specify whether to export your images with or without watermark.

Picture url(*Link auf Produktbild*)  

Field Name

Before Value

After Value

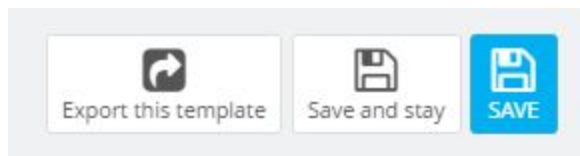

Image size

Urls of all pictures

With watermark?

 Hide this Field's settings

Save the configured templates or export them if they're finished.

Export

Click on your templates name.

Generate your CSV before it is visible and before export or download.
