

Traffic Light

1. Installation

After the module is uploaded and installed, it appears in your modules list

	Traffic light v1.0.2 - by Silbersaiten	Indicator of stock available in product page.
-----------------------------------------------------------------------------------	--------------------------------------------------	-----------------------------------------------

2. Functions

You actually define only two limits and three lines of text

When minimum quantity is reached	<input type="text" value="not available for order"/>
	<i>Message on a minimum amount of</i>
When average quantity is reached	<input type="text" value="only few parts!"/>
	<i>Message on a middle amount of</i>
When sufficient quantity is reached	<input type="text" value="available for order"/>
	<i>Sufficient quantity notice</i>
Amount of products for minimum quantity	<input type="text" value="1"/>
Amount of products for average quantity	<input type="text" value="23"/>

For every language in your shop, please write a text for all of three product availability statuses.

And set a limit for the minimum and average quantity of the product so the module "knows" when to put an appropriate light on.

You're done, enjoy!
